

Take Control of Your Health Using Biosimilars

Biosimilars Approved by the FDA are Safe and Effective

What is a biologic drug?

A biologic drug is made from living cells. They are used to treat many kinds of diseases like skin conditions, arthritis, and cancers. There are many biologic drugs used in the United States.

What is a biosimilar drug?

A biosimilar is a biologic drug that is a near-copy of the original drug. The U.S. Food and Drug Administration (FDA) approves biosimilars based on clinical studies. Biosimilars and the original drug are very alike. They are just as safe and effective.

Is a biosimilar the same as a generic drug?

Not exactly. Biosimilars are like generic drugs in some ways. Both are copies of the original drug that may come at a lower cost. The difference is a biologic drug cannot be exactly copied since it is made from living cells. Biosimilars are very close copies of the original drug. Since they are so alike, a biosimilar does not have clinically meaningful changes from the original drug.

Why should I switch to a biosimilar?

- > Provides the same treatment benefits
- > Are given the same way
- > More options
- > May lower costs

Biosimilars are safe and can offer more treatment solutions. Biosimilars may lower your medication costs.

Ask your doctor if biosimilar medications are available to you.

Our customer service team is also here to help. We can figure out your coverage and copay cost for biosimilars to treat your condition.
